Web Programming Project

Continent

Wednesday the 12th of June 2024

Félix Chevalier
Thomas Laurens

In our second year of the engineering preparatory course, we embarked on an ambitious project to develop a train ticket booking website for Europe, named "Continent". This project was a collaborative effort by Félix Chevalier and Thomas Laurens. The primary aim was to create a user-friendly platform to simplify train travel bookings across Europe, utilizing modern web technologies to enhance the user experience.

Project Objectives

The objectives of our project were:

1. Skill Development: To apply and enhance our web programming, database management, and project management skills through practical application.
2. Practical Solution: To provide an efficient and user-friendly platform for booking train tickets across Europe.
3. Modern Technologies: To incorporate cutting-edge technologies to deliver a secure, responsive, and user-centric website.

Feature Overview

Train Search Functionality

The website offers an intuitive interface for users to search for available trains between various European destinations. The search functionality is designed to be quick, efficient, and easy to use, providing users with multiple travel options.

Ticket Booking Process

Users can easily book tickets through a streamlined process that includes selecting train options, entering passenger details, and completing payments via a secure online payment system. This process ensures a smooth and hassle-free booking experience.

Technologies Used

- HTML, CSS, JavaScript: For creating the structure, style, and interactive elements of the website.

Project Structure

- **css/:** Contains the stylesheet files responsible for the visual presentation.
- **fonts/:** Includes various fonts used throughout the site for consistency and readability.

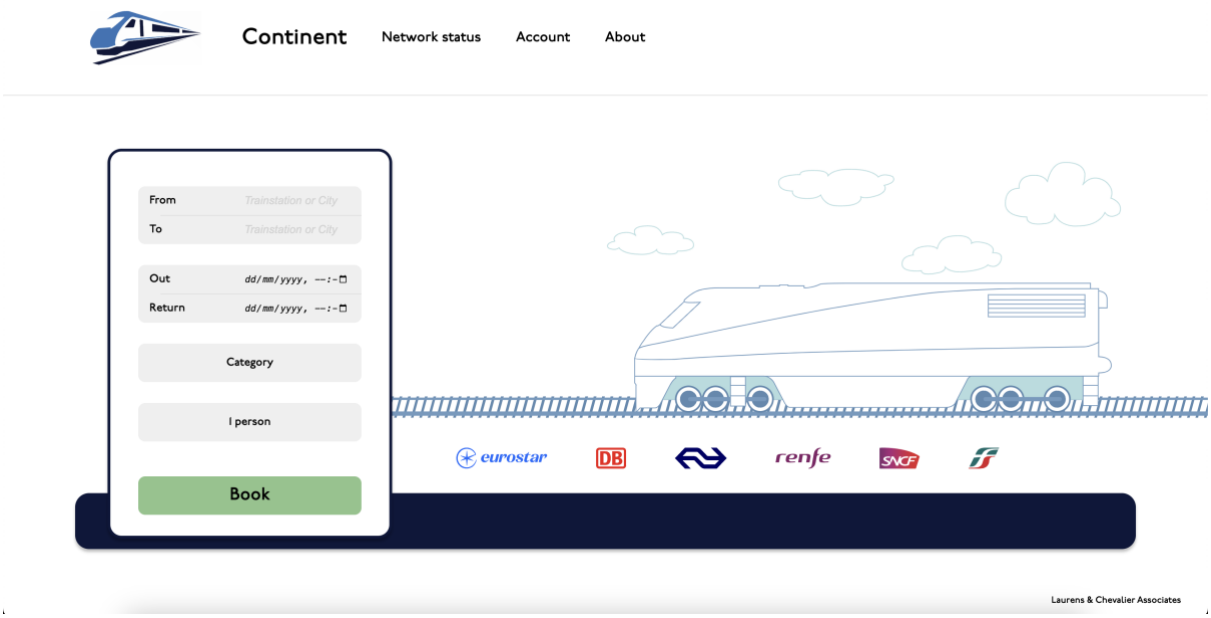

- **html/:** Houses the HTML files for different pages, including the homepage (index.html), about page (about.html), booking page (book.html), and registration page (register.html).
- **img/:** Contains images and logos of various European train companies, enhancing the site's visual appeal.
- **js/:** Includes JavaScript files that manage user accounts and booking functionalities, providing dynamic and interactive user experiences.
- **firebase.json and package.json**: Configuration files for Firebase and Node.js, managing project settings and dependencies.

Clarity, Form, and Error Management

We ensured clarity and coherence throughout the website by following best practices in web development. The code is well-commented, and the user interface is designed to be intuitive. Error handling mechanisms are in place to manage potential issues such as incorrect user inputs or server errors, enhancing the overall user experience.

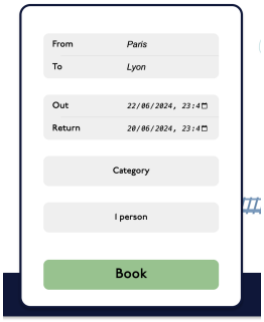

Illustrations of Results

Homepage: A welcoming interface that introduces users to the ContinentWeb platform with easy navigation options.

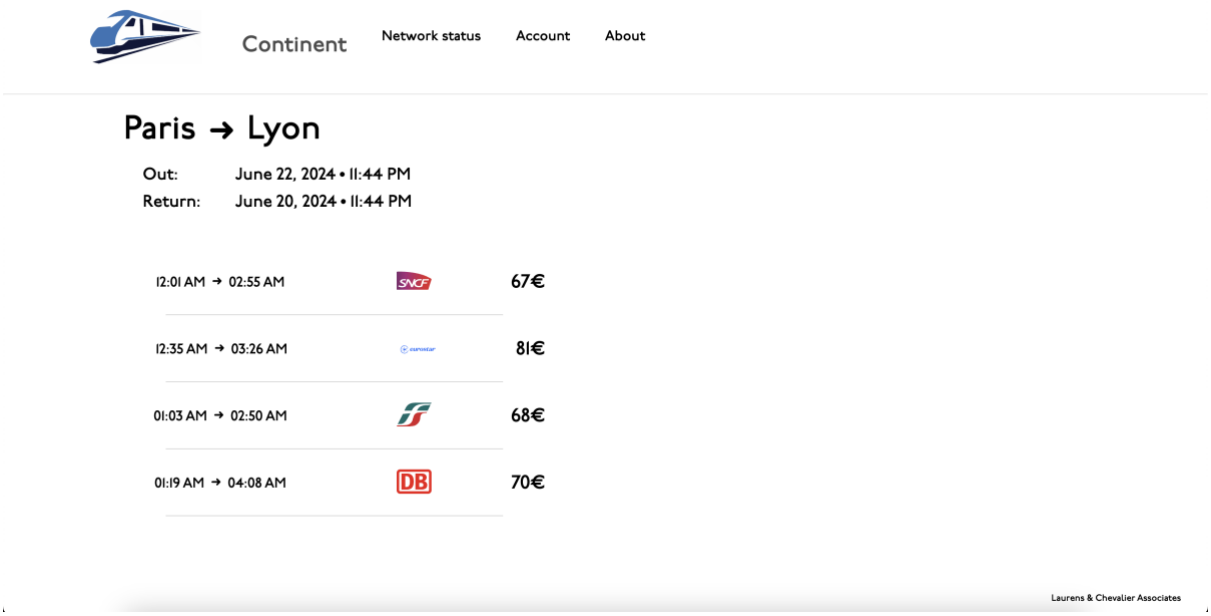

Search Functionality: A user-friendly search interface that allows users to find available trains quickly.

Thomas Laurens

Booking Page: A streamlined booking process that guides users through selecting trains, entering details

Conclusion

This project has been an enriching experience, allowing us to apply theoretical knowledge to a real-world problem. We have developed a deeper understanding of web development and project management, learning to collaborate effectively and overcome various technical challenges. We are proud to present Continent as a practical and modern solution for booking train tickets in Europe.
